**-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --****Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kline (6,315,210) in view of Avelov (4,669,653). Kline discloses the invention substantially as claimed. Kline discloses a automatic compensating valve for use with a shower having a valve body, plunger 374, first orifice 456 for cold water, second orifice 458 for hot water, first spring 388 biasing the plunger in the increasing hot water direction, thermostatic motor 416 for positioning the plunger in response to mixed water temperature and poppet check valve and shutoff valve assembly 274 in each of the hot and cold water inlets (see Figure 8C and col. 8, lines 10-17 and col. 9, lines 59-62). Avelov teaches the use of a wax motor 19 for positioning a hot and cold water mixing plunger 13, the use of a biasing springs 29, 30 on either side of the plunger and a valve stem assembly 23 within the plunger bore. It would have been obvious to one of ordinary skill in the art at the time the invention was made to have modified the system of such that it included the use of a wax motor for positioning the water mixing plunger, the use of a biasing spring on either side of the plunger and a valve stem assembly within the plunger bore in view of the teachings of Avelov.
